

Main menu

NOTE: It's easier to read on laptop, especially because of the plug-ins with LaTeX.

Here we will write the plan as the main menu

- Milestones
- Objectives
- Learning plan
- Prediction and Strategy (see other 2 docs)
- Software implementation plan
 - Data collection plan
 - Testing plan
- Buying plan

Milestones

- Start the readings
- Get a prediction model going, set that as a benchmark
- Analysis the data itself
- Start
- Gamble a bit to get a feel

Learning plan

Learning is working. Each reading should come with a note and review.

- Benter's note (3-5) days
- HK Jokey club tutorial (5-7 days)
- Dummy's book on horse betting
- Ed Thorp:
 - The math of gambling
 - KELLY CAPITAL GROWTH INVESTMENT CRITERION, near 800 pages, pick the thing you like and read
 - Beat the Market, 200 pages
- It can be good to review some portfolio stuff as well

Software implementation plan

Download the necessary data, put on Google Colab, pay some money if needed.

We should write detail later (range from how to evaluate the data/ build prediction bayes prior etc)
